

# Thor Multi Launcher

The Space Wolves Chapter fields small Devastator Squads known as Long Fang Packs. These small, highly specialized packs are often limited to occupying advantageous terrain due to their extremely limited firepower when moving between firing positions. The Long Fangs can use both the Rhino and the Razorback transports to counter this challenge, but neither of these assets augments the Long Fang's use on the battlefield. The Thor Pattern Multi Launcher combines the Razorback's limited transport capacity as well as upgrades the fire support capability with the Whirlwind MRL. Thus, the Thor Pattern truly augments the Long Fang's battlefield capability and fills a fire support requirement by a Space Wolves' Mechanized Force.

While principally a Space Wolves pattern, the Thor has recently begun to see action in some other marine armories.

Thor Multi Launcher					
	Points	BS	Armor		
			front	side	rear
Thor	143	4	12	11	10

**Substitution:** 0-1 Thor may be fielded instead of a razorback wherever a razorback may be fielded.

**Type:** Tracked

**Structure:** None

**Crew:** 1 marine

**Transport:** 5

**Fire Points:** None

**Access Points:** 1 Rear

**Options:** The Thor may take any upgrades available to the Razorback.

**Weapons:**

Whirlwind Launcher

Heavy Bolter

**Modeling:** The Model is an old style Games Workshop Rhino body mounted to the treads from a leman russ. The whirlwind launcher is the Forgeworld version and the front heavy bolter is from an attack bike.
